HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
ON THE POLYSEMY OF THE SUFFIX -KE IN THE HISTORY OF NORTHERN BASQUE

Georges Rebuschi
Sorbonne nouvelle & CNRS, UMR 7107

Abstract

The various semantic values of the suffix -ke in Northern Basque are shown to depend, in the analytic conjugations, (a) on the type of verbal complex - aspectually marked participles plus the auxiliaries izan/edun vs. aspectually unmarked radicals plus the auxiliaries "edun/ezan (the synthetic conjugation is ambiguous, since it neutralizes this opposition), and (b) on the "tense" of the inflected auxiliaries (present/past/hypothetical). Depending on the context, three epistemic values can thus be computed: equi-possibility, probability, and prediction - hence a specialized interpretation as an ulteriority marker, i.e. a future tense marker when used with a verb in the present tense. This future value is shown not to have been limited to the Souletin dialect, and to have enabled 16th century Basque to have an analytical "future in the future". Finally, a pragmatic value, the strong commitment of the speaker, will also be identified.

1. Introduction*

If Azkue's (1923-25: § 762-B) description of the morpheme -ke as: "caracteristica del modo pentencial" is correct as far as the Southern dialects are concerned, the situation is much more complex in the Northern dialects. To wit:

In this paper, I will try to be more systematic, and show that many shades of meaning of this affix can be computed from the verbal morphology it is a part of. But I will also show that other uses can be given a more specific interpretation than Lafon's mere allusion to "speech" or "discourse".

The first part of the paper consists in an overview of NB (Northern Basque) conjugation, and will progressively introduce the various uses of -ke, in particular

---

* I'm very happy to dedicate this short paper to my friend Benat, with whom I've exchanged ideas on Basque grammar — and many other topics — for nearly three decades. I am sure that, had he had the necessary space, in Oyharçabal (2003), to deal with the future perfect in -ke and the «future in the future» described below, he would have done a far better job than me.

1 The following abbreviations will be used.

a) Dialects: B-N, behe-nafarrera (French bas-navarrais); Lap., lapurtera (French labourdin); NL, nafar-lapurtera (French navarro-labourdin); Zub., zuberera (French souletin).
(i) in some conditional tenses (and sentences), and (ii) in the aoristic conjugations. In the second part (starting with §7), the use of -ke as a future morpheme will be examined: contrary to the received view, it will be shown that this value was not limited to the easternmost Souletin dialect (Zub.), until at least the middle of the 20th century. Moreover, this futural value of -ke in the analytic conjugation (yielding in particular a “past in the future”, and a “double future”) will be described in detail. Finally, a specific pragmatic content will be attributed to Lafon’s intuition that some occurrences of -ke really had to do with “discourse”.

2. The synthetic conjugation

As is well-known, only a handful of verbs (Lafitte’s 1962; ‘strong verbs’) can be directly inflected for tense and agreement — the ‘synthetic conjugation’. The basic distinction is between a present tense form which anchors the event referred to in the present time, and another. (Using Reichenbach’s 1947; vocabulary, unfortunately devoid of any aspectual considerations, the present tense corresponds to the identification of S, the Speech point, R, the Reference point, and E, the Event point.) Consider the unaccusative verb Joan ‘go/gone’.2 There are present (continuous) forms like n.oa ‘I’m going’ and h.oa ‘you’re going’ (where the initial n- and h- refer to an absolutive argument, 1st and 2nd p. singular, respectively, cf. the personal pronouns ni ‘I’ and bi ‘thou/you [familiar]’) and another (abstract) type of form, inattested as such if no affix is added: °n.ind.oa / °h.ind.oa.3 Such forms become “real” once a past tense morpheme (-(e)n) or an epistemic one (-ke) is suffixed to them: nindoa.n ‘I was going’, nindoa.ke ‘I could/would go/be going’ (conditional), ba.nindoa ‘if I went/were going’.

Basically, the forms derived from °nind.oa and the like therefore denote a break between the world hic et nunc in which the speaker and the hearer(s) are located, and the world (or states and processes therein) referred to: this latter world may be either located in the past, or be purely hypothetical, even fictitious or counter-factual. However, when the absolutive argument is 3rd person, there is a subdivision in the morphology of the finite verb. Thus, the prefix is z- in the past tense: z.oa.n ‘he was going’, but l- otherwise: ba.Loa ‘if he went’, Loa.ke ‘he would go’.

Importantly, the suffix -ke can also be suffixed to a present tense form: n.oa.ke ‘I can go’ in ‘common Basque’, but ‘I will go’ in Souletin/zuberera - and, as we shall see, in other northern dialects until a not too forlorn past.

Izan ‘be’ is a strong verb; note, among its many irregularities, that the epistemic suffix mentioned above in fact never occurs as -ke: it has two allomorphs uniquely used with this verb - a long one, -teke, and its shortened variant -te, as illustrated by n(a).iz ‘I am’, n(a).iza.te(ke) ‘I can be’ / ‘I will be’ (see Lafon 1970, 1972).

b) The references to the Bible will be given as is customary. LV stands for Latin Vulgate, KJV is for the King James Version, and CDR for Chalonner’s revision of the Catholic (hence, translated from the LV) Douay-Rheims translation. Finally, Imit. refers to Thomas a Kempis’ De imitazione Christi (early 15th century), which has also been translated many times into Basque.

2 The perfective participle is also the citation and dictionary form of Basque verbs.
3 The symbol «°» will precede diachronically reconstructed, and synchronically abstract forms, so as to avoid any confusion with ungrammatical forms and expressions.
Turning to transitive verbs, they follow the same distinctions. (i) In the present tense, the active or ergative argument is always cross-referenced by a suffix, e.g. *na1.kar.(t)zu2* ‘you’re carrying me,’ (dictionary form: *ekarri*). The same pattern can be observed in the other ‘tenses’, if the absolutive argument is 1 or 2 p. (sg. or plural): *ninde.kar.(t)zu₂ₙ* ‘you were carrying me’, *ninde.kar.ke.zu* ‘you would carry me’. But when the absolutive argument is 3rd p., and the ergative one, 1st or 2nd p., the latter is cross-referenced by a prefix, and no absolutive affix appears: ⁴ *ne.karr.en* ‘I was carrying (it)’; *ne.kar.ke* ‘I would/could carry (it)’. This phenomenon, which has come to be known as ‘ergative displacement’, provides additional morphological evidence in favour of a primary split between the present forms on the one hand, and past or fictitious/hypothetical forms on the other (compare the temporal and modal values of the English preterite and the French *imparfait*).

3. The first analytic conjugation: Aspectually specified compound tenses

The strong verbs just mentioned may, and the weak verbs must, have recourse to compound ‘tenses’, also known as ‘analytic tenses’. ⁵ The basic facts are these: (a) the lexical verb is realized by a participial form, followed by an inflected auxiliary; (b) there are three aspectual participles: perfective (ending in -*tu*, -*n*, -*i*, Ø), imperfective/iterative (-*ten*, -*tzen*), and prospective (derived from the perfective forms by the addition of -*ko* or -(*r*)*en*); (c) the distinctions described in §2 concerning the synthetic conjugation of the strong verbs carry over to the auxiliaries.

The three participles can be combined with any inflected form of the auxiliaries which they select—or which select them—with only one fundamental constraint: unaccusative verbs are only associated with *izan* ‘be’; as for transitive participles, they are normally associated with *‘edun* ‘have’, ⁶ unless a valency reduction (yielding a medio-passive meaning) has taken place, in which case the auxiliary is again *izan* ‘be’. ⁷

Some of the combinations—typically those with the auxiliary in the present tense sans plus need no special comments:

(1) a imperfective + present  
*ja.ten d.u* ‘he eats/is eating (it),’ lit. ‘eating he-has(it)’

⁴ Although absolutive number remains explicitly marked — to wit: *d₁.u.t₂ *₁₂ have it / *d₁.it₂.u.t₂ *₁₂ have them /__, but *n₁.u.en *₁₂ had it / *n₁.it₂.u.en *₁₂ had them*.

⁵ In order to avoid confusion, I will depart from Lafitte’s expression (*conjugaison périphrastique*) and follow the clearer distinction made by Oyarzabal (2003) and Ortiz de Urbina (2003): some periphrastic expressions proper will illustrated in the Appendix.

⁶ It so happens that the perfective and citation form of Basque ‘have’ is *ukan* in the eastern varieties (*BN* and *Zub.*), but homophonous with the perfective form of ‘be’, *izan*, in the westernmost dialect of Northern Basque (*Lap.*), as well as in the Southern dialects. Using the reconstructed form *‘edun* has become the rule.

⁷ De Rijk (1985) is probably the first Bascologist who explicitly noticed that it is impossible to use the synthetic forms of transitive verbs and to simultaneously delete reference to the agent. Thus, *dakar* is necessarily ‘he’s carrying (it)’, with a zero ergative suffix, never ‘he is (being) carried’ whereas *ekar.tzen d₁a* ‘it is carried/brought’ is the natural agentless version of, say, *ekar.tzen d₁a.t₂.u*t₂ *they, carry/bring it_. Moreover, it is impossible not to make reference to the existence of a (possibly irrelevant or unknown) object or patient, whence the brackets around the *it*’s in the translations of the examples (1a-c) below.
b perfective + present
   ja.n d.u  ‘he has eaten (it)’, lit. ‘eaten he-has(it)’
c prospective + present
   ja.nen d.u  ‘he’ll eat (it)’, lit. ‘to-eat8 he-has(it)’

When the auxiliary is [-present], some cases are semantically more delicate.

(2) a imperfective + past
   ja.ten z.u.en  ‘he ate/was eating (it),’ lit. ‘eating he-had(it)’
b perfective + past
   ja.n z.u.en  ‘he ate10/had eaten’, lit. ‘eaten he-had(it)’
c prospective + past
   ja.nen z.u.en  ‘he was about to eat it / he would have eaten it’

Note, on the one hand, the ambiguity (at least from the point of view of the translation) of (2b), which can be rendered either by a purely narrative preterite, or by a pluperfect in English). On the second interpretation of (2c), see the comments that follow (5) below.

4. The suffixes -ke and -ko in the conditional tenses

In general, no distinction is made between the imperfective and the prospective participles in a suppositive protasis, whereas the perfective participle forces a past conditional (hence necessarily counterfactual) interpretation:

(3) a ikus.ten / ikus.iko ba.lu  ‘if he saw it (now or later)’
b ikus.i ba.lu  ‘if he had seen it’

In the apodosis, the logical consequent is typically expressed as in (4):

(4) a ja.nen/har.tuko lu.ke  ‘he would eat/take it’  [(a continuation of (3a)]
b ja.nen /har.tuko zu.en  ‘he would have eaten it’  [(a continuation of (3b) - recall (2c)]

8 “To-eat” is, I must confess, a poor gloss for the prospective participle, but I’m unable to propose anything else. In any case, there is no deontic modality «naturally» associated with this participle. In Rebuschi (1984), I suggested that the -ko/-ren suffix reversed the time relation between the (Reichenbachian) Reference point (R) and the closer boundary of the process: in the case of the perfective aspect, the right boundary precedes R, and in the case of the prospective aspect, R precedes the left boundary of the process. Today, this still seems to be a reasonable description of the fact, but I’m not sure I would still maintain the sketchy «explanation» I proposed at that time.

9 Note, however, the neutralization of the opposition between the imperfective and prospective aspects in adjunct/adverbial clauses, with a possible evolution in the choice of the preferred form. For instance, for Mt 21,40 (Latin Vulgate Cum ergo venerit dominus vineae, KJV When the lord therefore of the vineyard cometh), AnBa 1828, Sal 1856, Irib 1860, have etor.tzen [or: ji.ten] denean, but Harriet 1855, Dv 1859-65, Léon 1946 and the more recent translations, Ezk 1974, and EdyB, etorr.tico denean.

10 The anteriority of the event or state referred to in the protasis (with respect to the contents of the apodosis) can be underlined by the duplication of the auxiliary - see (iii) in footnote (14) for instance: madarikatu izan ba.ninatu, lit. ‘if he had had cursed me’, mintzatu izan balizt, lit. ‘if he had had spoken’.

11 Recall footnote 9 above for adjoined temporal clauses.

12 The translation into «ate» in (a) above must be understood as iterative or continuous; in (b), as a pure narrative past.
In (4a), -ke indicates prediction, somehow grammaticalizing the then of the if-then correlative couple of complex conditional sentences.

Three variants of the past conditional (4b) deserve to be mentioned. Until the 17th century, the epistemic morpheme -ke was usually affixed to the auxiliary root, see (5a).\(^{13}\) As for (5b), although Lafitte’s grammar describes the form as usual, it has fallen out of use (see also Oyharçabal 2003), but it was well-attested until the very end of the 19th century;\(^{14}\) what is interesting in this particular case is the fact that the morphological quasi-symmetry <perfective ba+...> (in the protasis) / <perfective l...+ke> (in the apodosis) has been replaced by a morphologically distinct form in the apodosis, probably owing to the intuitive semantic proximity of the future in the past (recall the first translation of (2c)).

Finally, (5c), which, to my knowledge, is rarely mentioned in Basque descriptions, is attested in (mainly, but not only) in the Zub. translations provided in Aurrekoetxea & Videgain 2004 (see the Appendix).\(^{15}\)

(5) a) ja.nen / har.tuko zu.ke.en 'he would have eaten / taken it'
   b) jan / hartu l.u.ke  (id.)
   c) jan / hartu zu.ke.en  (id.)

In any case, both (4a) and (5a) point towards two distinct ways of referring to ‘ulteriority’: the prospective participles ja.nen and har.tuko indicate temporal poste-

\(^{13}\) (5a) is also the standardized construction recommended by the Basque Academy (Euskaltzaindia).

\(^{14}\) To wit, consider the alternation between the Zub. and Lap. translations of Ps 54/55,12-13: Archü (1862) first uses the structure (4b), and next the one illustrated by (5b), whereas Duvoisin (1859-65) reverses his choices:
a) LV-54,13 Quoniam si inimicus meus maledixisset mihi, sustinu issem utique. Et si is qui oderat me super me magna locutus fuisset, abscondissem me forsitan ab eo. / CDR-54/55,13 For if my enemy had reviled me, I would verily have borne with it. And if he that hated me had spoken great things against me, I would perhaps have hidden myself from him.
b) Arch-54,12 Ene etsaiak gaitzetsitü banündü, enizü n hitzik ere erra. nen 13 Eta hügüntzen nündienak nitzaz gaizki handi erran balü, behar bada gorde nündü ke zün harenganik. [gorde 'keep, kept' has a phonetically null perfective ending].

See also the Appendix.

\(^{15}\) Lafitte (1962: § 720) does not mention the use of this compound tense as a past (counterfactual) conditional, and in the table that follows his § 639, galdu zateken is only translated by «il devait s’être perdu» - i.e. it is understood as a past tense associated with the expression of the epistemic modality of (fairly strong) probability. Likewise, Ithury (1895: 381) only translates ukhan zukeen by «il l’avait probablement eu». As for Gèze (1873), a book devoted to zabevera, the combination is not even mentioned. See, however, Bonaparte’s ([1869] 1991: 192-196) «Conditionnel passé parfait» (tense No 34), Gavel & Lacombe’s (1937: 57) «conditionnel parfait antérieur» and Lafon’s ([1951], 1999: 306-307) «conditionnel passé, 2e forme». In the footnote 7 to his «Septième tableau préliminaire - Temps dits composés», concerning the forms erori zatekian (and ikhusi zükian), Bonaparte writes: «[...] le futur passé et le futur passé absolu y i.e. in Zub.] sont moins employés que le passé parfait et le passé antérieur absolu du conditionnel: erori zatekian, eroririk izan zatekian [sont employés] plutôt que eroriko zen, eroririk izanen zen.»
riority with respect to the reference point R provided implicitly or explicitly by the protasis, whereas -ke in the auxiliary marks a special type of assertion, expressing a logical prediction made by the speaker (prediction, and the expression of (high) probability, although intuitively very proximate, are distinct psychological attitudes, even if formal semanticists almost never consider prediction as a special subtype of modality). We shall see another association of the prospective ending on the lexical verb and the affixation of -ke on the auxiliary in section 11.

5. The second analytic conjugation and the aoristic (defective) auxiliaries

Let us now consider two defective verbs, which can only be used as (inflected) auxiliaries in certain compound tenses, and whose reconstructed forms are °edin (used with unaccusative verbs, root -a(di)-) and °ezan (with unergative and transitive verbs, root -eza-). They will be noted aux, below. A specific property of these pure auxiliaries is that they do not combine with any of the aspectually marked participles, but with the radical of the lexical verbs.

Sticking to the unmarked present tense for the time being, and choosing verbs in which the radical is distinct from the perfective participle, we thus do not only have three distinct analytic combinations (as suggested by (1) above), but four:

(6) a ekar.tzen du 'he brings it', lit. ‘carrying he-has-it’
    b ekarr.i du    'he has brought it', lit. ‘carried he-has-it’
    c ekarr.iko du 'he’ll bring it', lit. ‘to-carry he-has-it’
    d ekar °deza

Here again appears the symbol ‘°’, and no translation can be directly provided. This is because, like the forms of the °nindoa type, but now even in the present tense, an affix is compulsory for an aux₂ to be licit - and the verb complex to be interpretable.

Until the end of the 17th century, at least in the eastermost varieties of Northern Basque, the past suffix -(e)n (with z- replacing the present tense prefix d- of °deza above) was sufficient to license the forms, cf.:

16 Hence a «future tense» when the auxiliary is in the present tense, i.e. when Speech Time and the Reference Point either coincide, or belong to the (subjectively defined) same time interval - but a «future in the past» when it is in the past tense.

17 Lafitte (1962), who used ukân for «have» in his conjugation tables, unfortunately labelled this auxiliary iza, although it has nothing to do with «be». There is, by the way, a third defective auxiliary, iron, an inherently potential variant of (transitive) °ezan, which I’m leaving out here, because the affixation of -ke to it seems to have been merely pleonastic.

18 For the strong verbs, one must distinguish between the radicals, which often have a vowel prefix that drops in inflected forms, and the roots proper, which are devoid of that prefix. Thus etorri and ekarri are the perfective participles of «come» and «bring», etor- and ekar- their radicals, and -tor- and -kar- their roots.

19 Ithurry (1895: 58) already listed dadi and deza among a list of strong verbs in the present tense.

20 As is well-known to Bascologists, Leïçarraga’s (1571) New Testament is replete with such aoristic past forms, which were the unmarked narrative past tense in that text.
ON THE POLYSEMY OF THE SUFFIX -KE IN THE HISTORY OF NORTHERN...

(7) a Aingerua […] Nazarete hirira ethor ze di n. (Oy. 1657-64, XX: 25-28)21
angel-sg Nazareth town-to √come AUX2-PAST
‘The angel came to the town of Nazareth.’
b Inhardets ze za n. hitz hotan: … (id., XX: 43)
√answer AUX-PAST word these-in
‘She replied with these words: …’

The affixes that bridge the gap between the speech situation and the event or state referred to (which gap I suggested was conveyed by the "nindoa type paradigms), and those that licence the aoristic combinations are partly distinct. Besides the case of the past tense suffix, which has just been dealt with, two more morphemes belong to both lists: hypothetical ba- 'if' and its consequent counterpart -ke in the two conditional paradigms (ikus ba leza, bar leza ke 'if he saw it, he’d take it').22

With the prefixes d- and z-, i.e. when the meaning is really temporal, -ke always yields a potential interpretation: ekar d.eza.ke 'he can bring it’, eror d.ai.te(ke) 'he can fall down’ (error.i, 'fall(en)'), whereas it does not normally do with the non aoristic forms: ekarr.i du.ke and ekar.tzen du.ke today have a pure (epistemic) value of probability (superior to equi-possibility): ‘he must have brought it’, ‘he probably brings it’ (but see below for another semantic value of -ke in non-aoristic conjugations).

Finally, the complementizers -(e)n and -(e)la help form various subjunctives, see (8b) below for instance for the former one.

6. On the opposition between the synthetic and the analytic conjugations

A quite lucid description is provided by Oyharçabal (2003: 251-2):

For those few verbs which possess synthetic forms, the synthetic present expresses continuous aspect, whereas the analytical present has a habitual meaning; e.g. nator 'I’m coming’, nago ‘I am / stay’ vs. etortzen naiz ‘I come’, egoten naiz ‘I usually am/stay’.23

But the autor immediately adds that “this distinction is not always made” in the Eastern [i.e. Northern] dialects, in which "synthetic forms tend to be used only as stylistic variants of the corresponding analytical present forms.” The reason seems

21 Oyhenart wrote in the Low Navarrese subdialect of the Pays de Mixe (Amikuzera in Basque), which is very proximate to (northern) Souletin (see Camino 2004); now, as far as the verbal morphology is concerned, these dialects are far more conservative or «archaic» than the western varieties of Northern Basque: for instance, there is no aoristic past in Axular’s Gero (1643), the great classical Labourdin book.

22 For some speakers, there is an additional potential nuance introduced here - perhaps under the influence of the Southern dialects and the Basque Academy’s prescriptions.

23 Let me add that the izan itself could be used in the imperfective aspect with an explicit iterative value when, for instance, used in the periphrastic passive (in which the perfect participle agrees in number with the promoted subject NP/DP in N2), as in (a) or as the lexical verb «have», as in (b):

(a) Zuek baino altxatua goak izaten dire zeruko erresuman (Lar. 1777, ch. 41)
‘They are praised higher than you in the kingdom of heaven.’
(b) guziek bardin grazia izatten dute? (Dih. 1892, ‘Sacramendua’)
‘Do they all have (=get) the same grace?’
clear: given that the synthetic forms are morphologically simpler, they are unmarked - whence also their use in stage directions for example (Rebuschi [1982] 1997).

As for the weak verbs, although there does exist a specific imperfective or continuous periphrasis, Oyharçabal (ibid.) also notes that (depending on the context or the situation), their participles in -t(zen) can be used with an imperfective, rather than iterative, interpretation.

More important is the fact that in some contexts (typically in embedded clauses), the synthetic conjugation is also ambiguous from the point of view of the opposition between the imperfective value and the aoristic one; thus datorr. en, in which the -en suffix is a complementizer, has two analytic counterparts:

\[
\begin{align*}
(8) & \quad \text{(a) Ez dakit [nor etortzen d.en].} \\
& \quad \text{NEG I-know who come-IMP AUX-en} \\
& \quad \text{‘I wonder who comes.’} \\
& \quad \text{[embedded question]} \\
(b) & \quad \text{Nahi dut [etor dadi.(e)n].} \\
& \quad \text{want AUX Vcome AUX-en} \\
& \quad \text{‘I want him to come’, lit. ‘… that he come’} \\
& \quad \text{[governed subjunctive]}
\end{align*}
\]

An example that illustrates the long-standing alternation between the synthetic and the analytic conjugations in the subjunctive mood is provided in (9):

\[
\begin{align*}
(9) & \quad \text{Mk 14,12} \\
& \quad \text{LV - Quo vis eamus et paremus tibi ut manduces pascha?/ KJV - Where wilt thou that we go and prepare that thou mayest eat the passover?} \\
& \quad \text{a Hnd (1740: Lap.) - Norat nahi duzu goazen eta prepara diezagun…} \\
& \quad \text{b Dv (1859-65: lap.) - Norat nahi duzu goan gaitzezun behar denaren zuri aphaintzera…} \\
& \quad \text{c Léon (1946: B-N) - Norat nahi duzu goazen…}
\end{align*}
\]

24 With the adjective ari «busy» (Trask 1995). What shows that the lexical verb which precedes ari, and ends in -t(zen) is not an imperfective participle, but a nominalised form, is the fact that the direct object either must (in Souletin) or may (in the other northern dialects) be in the genitive case, rather than the zero/absolutive (see also Mounole 2008).

A lesser noted explicitly progressive or continuous periphrasis consists in using izan ‘be’ (rather than egor ‘be/stay’) as a main verb, also governing a nominalized form in in -t(zen). Here are two examples:

\[
\begin{align*}
(i) & \quad \text{Egun batez nangoela zuhaintze baten itzialbain erraiten dute} \\
& \quad \text{α β} \\
& \quad \text{‘One day as I was [sat/lay] in the shade of a tree, (and) as I was saying, my prayers, [gen]…’} \\
& \quad \text{[Tartas 1666: Irakurtzailari]} \\
(ii) & \quad \text{Nuiz nizateke zu.re ikhusten?} \\
& \quad \text{when I-shall-be you-gen seeing} \\
& \quad \text{'When shall I stand beholding you?’}
\end{align*}
\]

25 This was already true in the 16th century: see Lafon (1944: vol. 1, 162-163). The same ambiguity arises with another C° suffix, -ela, governed by verbs of saying. For instance, datorr.ela corresponds either to (Erraiten dute) etor dadi.ela ‘They say [order] that he (must) come’ (subjunctive) or to (Erraiten dute) etor.tzen d.ela ‘They say [report] that he comes’.

26 In (9a,c), the initial g- of goazen indicates a 1st p. plural absolute argument. On the other hand, in (9b), the initial g- of goan is the radical prefix of the typical Lap. form of ’(to) go’ - in other dialects, the prefix is j-. Consequently, the initial g- of the aux, gaitzezn in (9b) is simply (a part of) the absolute prefix g(a)-.
7. The suffix -ke as a ‘future’ morpheme in the synthetic conjugation

Up to now, we have already seen that the modal suffix -ke has several readings: first, suffixed to the aoristic auxiliaries in the present and past tenses —and consequently also sometimes in the synthetic conjugation— it contributes to a merely potential interpretation of the verb complex; second, when it is attached to any inflected form in l-, is marks the logical consequence expressed by the apodosis in a complex conditional sentence; third, in the other cases, it ‘normally’ expresses probability in today’s NL.

It is also well-known that in the Souletin dialect, it can form a ‘synthetic’ (in fact, agglutinative, but definitely not analytic) future tense (Archu 1862, Gèze 1873, Gavel & Lacombe 1937, Coyos 1999: 241) if it is suffixed to an inflected form in a non-aoristic present.

But it is less generally known that the same fact was also true of the other northern dialects, even fairly recently.27

Here are two illustrations with ‘have’ as a lexical verb.28

(10) Imit 3,4,1
Non curabis de vanis hominum verbis. ‘You will not care for men’s vain words.’
   a Inch (1883: Zab.) - Eztü ke zuj axolik jenten gaizki erranez.29
   b Hst (1896: Lab.) - Gizoen elhe hutsalez zer axola dukezu;
   c Léon (1929: B-N) - Jendeen solas alferrez ez dukezu axolarik.

(11) Mt 6,1
LV - Aloquin mercedem non habetis apud Patrem vestrum…
KJV - Otherwise ye have no reward of your Father… / CDR - Otherwise you shall not have a reward of your Father who is in heaven.
   a Dv (1859-65: Lap.) - saririk ez dukeze zuen Aita zeruetan denaren bai-
      tha[rik].
   b Léon (1946: B-N) - saririk ez dukeze zuen Aita zerukoaren ganik.

27 Ithurry (1895: 59) only translates dagoke and zegokeen by «il peut rester» and «il pouvait rester» respectively. This future was however also acknowledged for the Labourdin dialect in Bonaparte 1869, but was accompanied by the following disputable qualification: «Le futur de l’indicatif, en labourdin, a une signification qui est toujours conjecturale et qui diffère de celle du futur composé.» Oyharçabal (2003) also gives one example from the end of the 19th century in which the value is clearly futural, but does not discuss its use and implications.

28 The possibility of course existed with other transitive verbs. In two distinct translations of the Revelation (Apocalypsis), Duvoisin thus offers:

(a) Rev/Apoc 3,3
   LV - veniam ad te tamquam fur et nescies qua hora veniam ad te.
   CDR - and thou shalt not know at what hour I will come to thee.
   (i) Dv 1859-65 [Bible] - ez duzu jakinen zein orduz ehorrixko natzaitzun.
   (ii) Dv [ms., Apoc-1] - ez dakikezu zer mugaz ehorrixko natzaitzun.

AnBa (1828) also has ez dakikezu. Interestingly, none of the earlier translations used this synthetic form.

29 Maister (1757: Souletin) has an analytic future here: Eztü zu gizoen elhe banuetezas axolik ukheen. In fact, in appears that Inchauspé’s more recent text has many more examples of the «futural» -ke than Maister’s.
Here are now examples with two unaccusative verbs.

(12) Imit 3,48,9 - Ipsi stabunt foris ejulantes. ‘They will stay out lamenting.’
Léon (1929: B-N)\(^{31}\) Kanpoan bai\(\)t\(\)a\(\)z\(\)e\(\) hek orrobiaka.

(13) Mt 6,23
LV - Si autem oculus tuus nequam fuerit, totum corpus tuum tenebrosum erit.
Si ergo lumen, quod in te est, tenebrae sunt, tenebrae quantae erunt!
CDR - ‘But if thy eye be evil thy whole body shall be darksome. If then the light that is in thee, be darkness: the darkness itself how great shall it be!’
\(\)a \(\) Lç (1571)\(^{32}\) - Baina baldin hire begia gaixto bada hire gorputz guzia ilhun da.\(\)e\(\)k; beraz baldin hitan den argia ilhunbe bada, ilhunbe hura zein handi date\(\)3\(\)3\(\)k.
\(\)b \(\) Dv (1859-65: Lab.) - Aitzitik zure begia gaitza baida.\(\)e\(\), beltza da.\(\)e\(\) k zure gor-\(\)phutz guzia. Baldin beraz zure baithan den argia ilhunbea [ba]da.\(\)e, ilhun-\(\)beak berak zenenbatekoak ez da.\(\)e\(\) k\(\)e.
\(\)c \(\) Léon (1946: B-N) - eri balin ba\(\)du zu aldiz begia, ilhun da.\(\)e\(\) kgorputz guzia. Zutan den argia ilhunbe balin bada beraz, nolakoak ditaz\(\)k eilhunbeak berak?

\(\)30 I have even found examples in which only Léon (first half of the 20th century) uses -ke with a future value, e.g.:
(a) Mk 16,(17-)18
LV-17: signa autem eos qui crediderint haec sequentur… 18: serpentes tollent et si mortiferum quid biberint non eos nocebit super aegrotos manus inponent et bene habebunt / KJV - 17: And these signs shall follow them that believe… 18: They shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover.
Léon (1946)-17: Sinesten dutenek huna zer mirakuluak eginen dituzten: … 18 sugeak eskuetan erabiliko, eta phozoinkia iretsirik ere ez da.\(\)e\(\) k te kalterik, eskuak erien gainean emanen dituzte eta eriak sendatuko dira. [Lit. «they shall have no harm».]

\(\)31 Here again, all the other translations in Northern Basque I know of have an analytic future here, ego\(\)nen\(\) dire/dira:\(\)k here.
\(\)32 It is difficult to classify Leïçarraga’s language dialectwise; the translation obviously was intended to help build a Northern Basque koiné, and displays many Labourdin properties. However, as far as the conjugation is concerned, it definitely displays many eastern features - see the detailed discussion in La-\(\)fon (1944: I, 59-65).
\(\)33 Leïçarraga never used the familiar or allocutive forms (da.te.k here) in questions.
\(\)34 Note first that the «futural» form bai.dai. te is also used in the two protases here — compare La-\(\)fon ([1970] 1999: 497): «Aujourd’hui même, [il] s’emploie rarement. Au lieu de dire bada\(\)e” s’il peut venir”, har bada\(\)ez\(\)e “s’il peut prendre”, on ajoute plutôt abal “possible à des suppositifs ordinaires”: joaiteg abal bada, hartzen abal bada.”
Second, note that this sentence also illustrates the (purely morphological) neutralisation between the izan «be» and «edin in some varieties of lap and NL (as described in Bonaparte (1869) and Lafitte (1962), between others. This is also true of the plural form da.\(\)iz\(\)t\(\)e at the end of this example, and of di.\(\)atz\(\)e in (10c). But, as shown by ex. (12a) and (c), this was neither the case in Leïçarraga’s NT, nor in late 19th century Zub.
\(\)35 The copula is twice translated by its bivalent variant have here.
Of course, one might argue that a potential “flavour” has been added to the Latin future, but in the following example, two unmarked (prospective) futures, (α) and (β), are explicitly paraphrased by a futural use of -ke (γ) and (δ), thereby excluding such a possibility:

(14) Etcheberry (1875, pp. 212-213: Lap.)

Zer ere neurri edo iarriz bertzeak iartzuko, neurtuko izanen zarete, Erran nahi baita, zenbatenaz bertzentzat urrikalmendu, miserikordia baihezki, hanbatenaz Jaintoa miserikordiatsu ditakelat zuretzat.

Lit. ‘By whatever measure you will measure or gauge α the others, you will yourselves be gauged β. Which means that by how much you will have γ mercy or forgiveness for others, by so much will God δ be merciful with you.’

Likewise, in the contexts to be presently examined, this objection does not hold either.

8. The perfective future or future perfect (-tu + -ke)

As could be expected, this use of -ke is also available with auxiliaries. This most often happens to express a “past in the future”, i.e. an accomplishment in the future, in adverbial clauses. We thus find many passages like the following:

(15) Rev/Apoc 11,7

LV Et cum finierint testimonium suum, bestia… faciet adversum eos bellum / CDR And when they shall have finished their testimony, the beast shall make war against them…

a  Lç (1571) - Eta akabatu dukeitenean bere testimoniajea, bestiak gerla eginen dix haint kontra.

b  AnBa (1828: Lap.) - Eta beren lehukotasunaren bihurtzen akabatu dukeiten ondoan, … Abreak gerla eginen diote.

c  Dv (1859-65: Lap.) - Eta akhabatu dukeitenean beren lehukotasuna, basabe-reak gerla emanen diote.

d  Inch (1856: Zub.) - Eta urchentu dukeiienan bere jakilegoa, saia gudu-kan ariko da hoi en kontre.

(16) Rev/Apoc 20,7

LV - Et cum consummati fuerint mille anni, solvetur Satanas de carcere suo, et exibit…

CDR - And when the thousand years shall be finished, Satan shall be loosed out of his prison and shall go forth…

a  Lç (1571) - Eta konplitu diratenean milla urtheak laxaturen date Satan bere presoindegitik.37

b  Hnd (1740: Lap.) - Eta akhabatu diatzenean milla urtheak, lexatu izanen da Satana eta atherako da bere presnondegituik…

---

36 Etcheberry’s book is another translation, but I have not been able to access the original text.
37 On the «double future» laxa.turen da.te in the second clause, see §10.
But the future perfect also appears in the apodosis (or main clause) of a non-fictitious conditional clause; in such cases, -ke does double duty, since it also marks the logical consequence that follows from the preceding clause in ba- ‘if’ - note the very late date of ex. (17c).

(17) Mt 18,15
LV - Si te audierit, lucratus es fratrem tuum. / KJV - if he shall hear thee, thou hast gained thy brother. / CDR - If he shall hear thee, thou shalt gain thy brother.
   a Hnd (1740) - Aditzen bazitu, irabazi dukezu zure anaia.
   b Dv (1859-65) - Entzuten bazaitu, irabazi dukezu zure anaia.
   c Sal (1856: B-N) - behatzen bazazu, irabazi dukezu zure anaia.39
   d (Léon 1946: B-N) - ontsa hartzten bazitu, zure anaia irabazi dukezu.
   e (Ezk 1974 N-L) - Entzuten bazaitu, zure anaia irabazi dukezu.

In (18) now, the first occurrence of the future perfect (a), although it appears in an embedded clause (governed by uste duzue ‘(do) you think’), functions as if it were in a root clause: Zenbatez tormenta borthitzagoa merezi tu? ‘How much harder torment will he have deserved?’ More interesting is the duplication of the auxiliary, which marks relative anteriority, in the second occurrence (b), thereby creating a “future pluperfect”:

(18) Heb 10,29
LV - quanto magis putatis deteriora mereri supplicia qui Filium Dei conculcaverit…? [Nova Vulgata: quanto deteriora putatis merebitur supplicia…] / KJV - Of how much sorer punishment, suppose ye, who hath trodden under foot the Son of God…?
   a Lç (1571) - Zenbatez uste duzue tormenta borthitzagoa merezi tu dukezu, lainkoaren Semea einen apian ezarti iukan dukeenak,…?
   Lit., ‘How much worse torment do you think he will have deserved, he who will “have had” trodden upon the Son of God under his feet?’40

9. The imperfective future (-tzen + -ke)

The combination of a -t(z)en participle and an auxiliary in -ke, on the other hand, is much rarer. Here are some examples— the first one from a translation, the
second one from a grammar of the same Zub. dialect, but the third one is indisputably in the Lap. dialect:41

(19) Mt 21,40
LV - Cum ergo venerit dominus vineae, quid faciet agricultis illis? /KJV - When the lord therefore of the vineyard cometh, what will he do unto those husbandmen? / CDR - When therefore the lord of the vineyard shall come…
Inch (1856: Zub.) - Jiten datekienian mahastiaren nausia zer eginen dui mahasti-zañ haier?

(20) Arch (1868, Zub.: 45)42
Egun batez, ikhusten nakezinian zure nahikuientzat erentürök… kontent zirate…
‘One day, when you see me anxious to please you, you’ll be glad’43

(21) Lk 21,31
LV - Ita et vos, cum viderit hic fieri, scitote quoniam prope est regnum Dei.
KJV - So likewise ye, when ye see these things come to pass, know ye that the kingdom of God is nigh at hand.
Hnd (1740: Lap.) - Hala zuek ere ikustin ditzünian zuritiku horiek gertha-tzen, jakizue hurbill ditekela44 Jainkoaren Erresuma.

(19) cannot be compositionally interpreted, because the act of coming must logically precede the one referred to in the second clause. As for (20) and (21), the case is unclear, since the seeing of the speaker doing this or that need not be over for the addressee to be glad in the first case, and the seeing and the learning in the second one may also be interpreted as simultaneous.

Finally, the next example is clearly compositional (and, here again, induced by the context):

---

41 Gèze (1873: 197) does not make any difference between the three forms eskenüten diat, eskenüto diat and eskenzen diaket translated by ‘je l’offrirai / je l’offrirai’ and labelled ‘futur présent’, i.e. future with respect to the present time. But if the first and second forms are mere free variants, it is difficult to admit that the third one is grammatically on a par with them.

42 Archu also used this form at least once (induced by the context - the preceding clause) when translating a text originally in the present tense:

(i) Ps 62/63,10/12
LV - Rex vero laetabitur in Deo; laudabuntur omnes qui jurant in eo…
KJV (63,11) - But the king shall rejoice in God; every one that sweareth by him shall glory / CDR-62/63,12… all they shall be praised that swear by him.
Ar (1862: Ps 62,10) - Errege aldiz alegeratulo dazü, Jinkuan; laïdatsürük dazűkezü, haren izenian zin egiten ditsükienak, oro.

Here, there is first an unmarked analytic future: a; next, a resultative medio-passive (the perfective participle is followed by the partitive suffix -(r-)ik; β; finally, the verb complex γ is another illustration of the imperfective participle associated with a auxiliary in the future.

43 The author’s own translation into French reads: «Un jour, quand vous me verrez docile à vos désirs… vous serez content…».

44 On the -ke in this verb and the like, see §11 below.
476 GEORGES REBUSCHI

(22) Mt 24,19
LV - Vae ... nutrientibus in illis diebus! / KJV - And woe unto them ... that give suck in those days!
a Lç (1571) - Dohain-gaitz ... eredoskiten duketonen\textsuperscript{45} egun hetan!
b Hnd (1740: Lap.) - Zorigaitz, ordean, ... haurrak eredoskiten duketentzetat egun hetan.\textsuperscript{46}

10. The prospective future or “double future” (-tuko + -ke)

Cross-linguistically, the notion of “future in the future” is an interesting one - see among others the discussions in Jespersen (1924: ch. 19), Gardies (1975: 146-147) on the ‘compound tenses according to meaning’ in the Port-Royal Grammaire, and Areces & Blackburn (2005).

In any case, the association of a prospective participle and an auxiliary with -ke in a non-conditional sentence was attested form the 16th century till the 18th. However, it is only in Leïcarraga (1571) that this compound tense systematically expresses ulteriority with respect to a (preliminary) event which is itself located in the future. Here are a few examples.\textsuperscript{47} In (23), the context is clear: the first conjunct (which contains a relative clause) predicts that a time and event will arrive later, and the second conjunct (introduced by eta ‘and’) refers to a posterior event, as also indicated by the adverb gero ‘later’:

(23) Mt 9,15
LV - Venient autem dies, cum auferetur ab eis sponsus, et tunc ieiunabunt.
KJV - but the days will come when the bridegroom shall be taken from them, and then shall they fast.

\textsuperscript{45} Note yet another allomorph of -ke: -kei-, only attested, as far as I know, in Lç (1571) with *edun. Besides, re: the ending -en here, recall that in early Northern Basque, the genitive could convey a prolicative or destinative meaning (cf. -ent.tzat in (21b)).

\textsuperscript{46} See also:

(i) Lk 9,48
LV - Quicumque susceperit puerum istum in nomine meo, me recipit; et, quicumque me receperit, recipit eum, qui me misit. / KJV - Whosoever shall receive this child in my name receiveth me: and whosoever shall receive me receiveth him that sent me.
Hnd (1740: Lap.) - Nork ere errezibituko baidu haur hau ene izenean, ni nauke errezibitsen, eta ni errezibitsen nauenak duke errezibitsen ni igorri nauena.

The first conjunct is particularly clear: the imperfective participle indicates the simultaneity of the two actions (that of receiving this child, located in the future, and that of receiving the speaker), a clear contribution to the intended identificational meaning of the sentence. But since the participle fulfills this function, the only way to express the future is to have recourse to -ke. If, admittedly, the second conjunct is less transparent (owing to the use of the imperfective, rather than prospective, participle in the free relative), both uses of -ke are parallel.

\textsuperscript{47} Intriguingly, if Lafon ([1972] 1999: 517) does write: «Tandis que le futur composé [usuel] exprime un fait futur, sans autre précision, le futur [«double» - cf. Lafon 1944, II, 69-74] à suffixe -ke se définit par le fait qu’il exprime soit un fait futur de date indéterminée et qui est sujet à se répéter, soit un futur qui s’accomplit intégralement et instantanément [futur non-duratif], soit un fait futur qui s’accomplit après un autre fait futur (futur que l’on pourrait appeler ultérieur)», however, none of the examples that follow in that text (1999: 517-519) illustrate the third case, which is the one on which I naturally wish to concentrate.
On the Polysemy of the Suffix -ke in the History of Northern...

Lç (1571) - Baina ethortiren dirade egunac edekiren baitzaitie ezkondua eta orduan barur egimen baitukeite.

In (24) now, there is a succession of two instances of a perfective future (α,α'), which mark the anteriority of the actions with respect to the unmarked analytic future (β), and finally a prospective future which indicates the fact that yet another action will take place later on (γ):

(24) Rev/Apoc 2,26-27
LV - 26: Et qui vicerit, et custodierit usque in finem opera mea, dabo illi potestatem super gentes, 27: et reget eas in virga ferrea… / KJV - 26: And he that overcometh, and keepeth my works unto the end, to him will I give power over the nations. 27: And he shall rule them with a rod of iron…
Lç (1571) - 26: Ezen biktoria ukan dukeenari, eta ene obrak finerano begiratu ditukenezari, emanen draukatu, bothere Jentilen gainean. 27: Eta gobernaturen dituke, burdinazko zihorrez...

A few examples of a transparent use of the future in the future are attested until the 19th century, see (25), where, now, the imperative clause that precedes the relevant one clearly implies that a future preliminary action will have taken place:

(25) Mt 7,5
LV - (Eice primum trabem de oculo tuo,) et tunc videbis eicere festucam de oculo fratris tui. / KJV - (First cast out the beam out of thine own eye;) and then shalt thou see clearly to cast out the mote out of thy brother's eye.
Hrt (1855: Lap.) - Khen ezazu lehenik eta orduan ikhusiko dukezu nola khen dezakezun zure anaiaren begitik phitsa.

Haraneder (1740) also has quite a few prospective participles associated with a future auxiliary. In one case, his use is parallel to Leiçarraga's:

(26) Rev/Apoc 10,6-7
LV - 6: et juravit… quia tempus non erit amplius: 7: sed … cum coeperit tuba canere…
CDR - 6: And he swore … That time shall be no longer. 7: But… when he shall begin to sound the trumpet…
a Lç - 6: Eta iura zezan … ezen gehiago denborarik extela izanen: 7: Baina zazpigaran Aingeruaren bozeko egunetan tronpetaz ioiten hasiren denean akabsuren datela lainkoaren misterio

48 The reader must carefully distinguish between the present form dira.de «they are», 3rd p. pl., and the future form dira.te «they will be»: -de is a (redundant) pluralizer, whereas -te is an allomorph of -ke and -teke, as mentioned above.

49 Interestingly, in Leiçarraga’s text, because the second form is the unmarked one, the sentences that follow are of the same type β:

(i) LV - …et tamquam vas figuli confringentur, 28: sicut et ego accepi a Patre meo; et dabo illi stellam matutinam. / KJV - …as the vessels of a potter shall they be broken to shivers: even as I received of my Father. 28: And I will give him the morning star.
Lç (1571) - …eta xeketsuren dirade lurrezko unziak bezala, nik ere Aitaganik rezebitu ukan dudan bezala; & Eta emanen draukat hari artizarra.
But in the overwhelming majority of the cases, there is, as far as I can see, absolutely no possible semantic difference between such forms and the unmarked analytic future.\(^{51}\)

11. Other uses of *-ke* with non-aoristic verb forms

Finally, there remain quite a few (pragmatic) uses of *-ke*, both in the synthetic and the analytic conjugations, which can best be defined as conveying the speaker’s strong commitment to the content of his speech. Here are three examples, the first two with a *izan* ‘be’ synthetically conjugated, and the third with *-ke* suffixed to an auxiliary.\(^{52}\)

(27) Mt 13,19

\begin{itemize}
  \item LV - Omnis, qui audit verbum regni et non intellegit, venit Malus et rapit, quod seminatum est in corde eius; hic est, qui secus viam seminatus est.
  \item CDR - When any one heareth the word of the kingdom, and understandeth it not, there cometh the wicked one, and catcheth away that which was sown in his heart: this is he that received the seed by the way side.
  \item Hnd (1740: *Lap.* - Nork ere aditzen baidu Erresumako hitza eta ez baidu har-\text{tzen ungi, heldu da izpiritu gaixtoa eta arrapatzen du haren bihotzean erein izan dena; hura *ditke* bidearen basterrean erein izan dena.
\end{itemize}

(28) Etcheberry (1875, p. 263: *Lap.* - ‘Jauna, zein da beraz salduko zaituena?’ Jesusek ihardetsi zuen: ‘Hura *ditke* niko ogia bustirik emanen diodana.’ Lit., ‘Lord, which is, then, the one who will betray you?’ Jesus replied: ‘It is/ will be the one to whom I shall give the moistened bread.’\(^{53}\)

\(^{50}\) *Cœpere* ‘begin’ is left untranslated, but this does not affect the point under discussion.

\(^{51}\) A century later, such vacuous double futures were still to be found:

(i) Mt 6,6

\begin{itemize}
  \item LV Tu autem cum orabis, intra in cubiculum tuum… / CDR - But thou when thou shalt pray, enter …
  \item Hrt (1855: *Lap.* - zure othoitza egiten dukezuen\
\end{itemize}

\(^{52}\) In the following translations (with *edun* used as a lexical verb), it is difficult to know whether *-ke*- marks a situation-induced future, or the speaker’s strong commitment:

(i) Jn 12,48

\begin{itemize}
  \item LV - non accipit verba mea, *habet* qui iudicet eum / KJV & CDR - He that … receiveth not my words, *bath* one that judgeth him.
  \item a Hnd (1740: *Lap.* - ene hitzak errezibizten ez dituenak, *baduke* bere jujea.
  \item b Hrt (1855: *Lap.* - ene hitzak onhenten eztituenak, *baduke* juierik asko.
  \item c Urr (1873: *Zub.* - ene elhiak izentzenak, *baduke* nark jüja.
\end{itemize}

\(^{53}\) A passage inspired by Jn 13,26. Even Haraneder used the present tense here-but he did use a double future in the (semi-)free relative clause: *Haitha da nik ogia butirik emanen diokedana.*
ON THE POLYSEMY OF THE SUFFIX -\textit{ke} IN THE HISTORY OF NORTHERN...

(29) Mt 26,25

LV - “Numquid ego sum, Rabbi?”. Ait illi: “Tu dixisti”. / KJV - Master, is it I? He said unto him, Thou hast said. / CDR: ... Thou hast said it.

Hnd (1740: Lap.) - «Nausia, ni othe naiz?». Ihardetsi izan zioen Jesusek: «Erran \textit{dukezu}».

It should be obvious that the suffix -\textit{(te)ke} in the foregoing examples does not contribute any epistemic value of potentiality, or of probability; neither does it help to refer to ulteriority: its rôle is to highlight the assertion as such.

This pragmatic use of -\textit{ke} is restricted to root clauses - as could be expected, since it is root clauses are the normal locus for the expression of the illocutionary force of an utterance.

The same usage can be found in the 20th century, as in the following excerpt (in the original Latin text, note the ellipsis of ‘be’, which can only be understood as a generic present):

(30) \textit{Imit} 2,1,1

Frequens illi visitatio cum homine interno, dulcis sermocinatio, grata consolation, multa pax, familiaritas stupenda nimis. / Benham - ‘He often visiteth the inward man and holdeth with him sweet discourse, giving him soothing consolation, much peace, friendship exceeding wonderful.’

Léon (1929: B-N) - Gizon bilduak ardua \textit{duke} Jesus ikusliar; ardua \textit{dituzke} haren bake nasai, elhe gozo, kontsolamendu eztia, eta harekin adiskidetasun bat harritzekoa.

In (31) now, the reference to ulteriority and the speaker’s commitment are conflated - in any case, since it is the Lord who is (supposed to be) speaking, neither potentiality nor probability can be involved:

(31) \textit{Imit} 3,43,2

Cui ego loquar, cito sapiens erit.../ He to whom I speak will be quickly wise.

Léon (1929: B-N) - Nori ere mintzo bainiz eta hura laster \textit{ditake} jakintsu...\textsuperscript{54}

A final example from is provided in (32) - again, only Léon’s translation displays -\textit{ke}:

(31) Mt 13,12

LV - Qui enim habet, dabitur ei, et abundabit / KJV - For whosoever hath, to him shall be given, and he \textit{shall have} more abundance.

Léon (1946: B-N) - Baduenari emanen izanen zaio, eta hola gaindika \textit{baduke}.

Conclusions

In the aspectually specified analytic conjugation, when the (primary, non-defective) auxiliaries are in the present or past tense, the suffix -\textit{ke} basically indicates prob-

\textsuperscript{54} For this passage, only Léon has -\textit{ke}; all the other translators (see the list in footnote 31) simply use the unmarked prospective future.
ability in NL today, but it could also have a future value until at least the middle of the 20th century (just as it has always had in Zub.). This latter semantic import is obviously linked to the “prediction” contribution -ke has always had in the inflected verb forms used in the apodoses of conditional sentences (referring to either a fictitious or a possible or real world). Thus, in NL, the suffix -ke is not inherently potential: in these dialects at least, it is only potential when suffixed to the defective, aoristic auxiliaries (aux$_r$) in the present and past tenses, associated with the radical of a lexical verb (and the corresponding synthetic forms).

Finally, -ke could also indicate the speaker’s strong commitment to what s/he said. This suffix is thus an underspecified modal morpheme, whose more precise interpretation is sometimes, but not always, dictated by its morpho-syntactic environment.

Appendix: the distribution of -ke and related conjugated forms in the Recueil Bourciez

As the examples in the paper all come from religious sources, and can thus be considered to be stylistically biased, I wish to provide here a description of the 140 over translations into Northern Basque of the five French future tenses, and the one past conditional, found in a text of which was systematically translated into the local subdialects in the very late 19th century (Aurrekoetxea & Videgain eds., 2004). Here are the main results.

(a) The “pure” future: (Je vais me lever, j’irai trouver mon père) et [je] lui dirai… ‘I’ll go to my father and will tell him…’ (§5) [Lk 15,18]

‘[Je] lui dirai’ is always translated by a (morpho-phonological variant of the) basic form of the unmarked type: joanen naiz.

(b) A future passive: Tu seras puni, ‘You’ll be punished.’ (§2) [No counterpart in Lk]

This case is more interesting, since the passive is periphrastic, the perfective participle either agrees in number with the (promoted) subject (Lap. & NL) or is followed by the partitive suffix -(r)ik (Zub.). The question is then whether izan ‘be’ is itself in the prospective, and followed by an auxiliary (the same ‘be’) in the present

55 In spite of its title, it is a secularized —and expanded— version of Lk 15,11-32, translated in almost every local variety of Basque and Gascon in the last decade of the 19th century. Of course, A&V (2004) only provides the Basque versions. For details, see Videgain (2005).

56 150 translations are announced, but some texts are simply distinct transcriptions of the very same translations. Besides, sometimes, the translation is either skipped, or too removed from the original to be considered here.

57 The idiomatic use of aller is usually translated by a simple prospective future, e.g. xuti.tuko naiz, except in a handful of periphrases, namely xutizera(i) noa with ‘to go’ and a nominalized verb in the allative case (4 instances in Lap.), but also with nahi izan/°edun ‘want’ (BN, 2 instances, Zub., 3 instances), and with behar izan/°edun ‘must/have to’ (Lap., one case). The translation of the second verb (j’irai) is often dependent on the translation of the first one, which is the reason why I’m also leaving it out here.

58 It is the (proportionately) high frequency of the word order of type III below which I take as a test that the Basque passive is periphrastic rather than analytic. See also ex. (a) in footnote 23 on this matter.
tense, or whether passive ‘be’ is directly inflected, but suffixed with -ke. I’ve distinguished three types:

I: Punītua/punīturik b(a)izate(ke) [synthetic conjugation of the passive copula/auxiliary]
II: Punītua/punīturik izanen biz [analytic conjugation of the passive copula/auxiliary]
III: Izanen biz punīturik/punīturik [analytic, with reversed word order]

In Lap. and BN, type I is never used, not even in the Pays de Cize (Amikuze); but there are 10 examples of type I in Zub., as against 21 instances of type II and 8 cases of type III.59

(c) A volitive future: Comme tu voudras ‘As you like.’60 (§1) [No counterpart in Lk]

We have here another periphrasis, with nahi which can be interpreted (here) as an uninflated noun, ‘will’ and a form of °edun ‘(to) have’. Four constructions are used:

I: Nahi duk(an bezala), often contracted into nahuk(an b.), i.e. with no futurity expressed (duk is in the present tense).
II: Nahiko duk(an bezala), with the prospective morpheme directly suffixed to nahi.61
III: Nahi dukek(an bezala), where it is ukan/°edun which is marked for the future by -ke.
IV: Nahi izanen/ukanen duk(an bezala), with a periphrastic future for ‘to have’ replacing the synthetic form of type III.

In the historical province of Labourd (La purdi), there are 30 translations of type I, two of type II (in Urcuit-Urket and Jatzou-Jatsu), and one of type III (in Bardos-Bardoe, the easternmost village of the province). In Low Navarre (Behe-Nafarroa), there are 60 translations of type I, only one of type II (in Aincille-Aintzila), and 6 of type III (two in the territory of Arbonel/Arberoa, 3 in the Pays de Mixel/Amikuze, and one in the Pays de Cizel Garazi). As we turn to Soule-Zuberoa, the situation is dramatically different: there are 18 translations of type III, almost as many as of type I (21); finally, there is only one instance of type II (in Haux-Hauze), and this area is the only one in which an occurrence of type IV can be found (in Etcharry-Etxarr).62

---

59 Therefore, there is, in fact, no example of punītua b(a)izate(ke): only punīturik bizate(ke) is really attested.
60 Context: ‘Donnez-moi ce que je dois avoir.’ […] ‘Give me what I’m entitled to.’
61 There does exist a verb nahitu «to have come to desire» (DGV/OEH, vol. 12), for which both a perfective use (with an inflected auxiliary) and an imperfective use (nahitzen) are attested. Therefore, the expected prospective would be nahituko; it follows that nahiko must be analyzed differently, probably as an elliptical form of nahi izan/ukan + the prospective suffix.
62 The enormous proportion of type I translations is probably due to the idiomatic character of the future tense in the French expression in the text. It is therefore difficult to draw definite conclusions from the figures obtained, although the contrast between the use of type III (in which -ke appears) in Zub. vs. the other dialects no doubt reflects the contrasting figures obtained in case (b), the future passive.
(d) A deontic future: ‘Il faudra que tu chantes toi aussi!’ ‘You will have to sing too’ (§ 9) [No counterpart in Lk]

Here again, a periphrasis is used, in which behar replaces nahi of (c) above, and in which the word order varies: the lexical verb general follows the behar-aux. sequence.

The following types are attested:

I: Behar duket kantatu / kantu egin, with the inflected aux. in the -ke.
I': Kantatu behar duket, id., with the lexical verb preceding the behar-aux. sequence.
II: Beharko duket kantatu / kantu egin, where prospective -ko is directly suffixed to behar.
II': Kantatu beharko duk (same difference with II as in I' vs. I).
III: Behar izanen/ukanen duk kantatu, where the verb have is itself submitted to the analytic prospective conjugation.

Here again, there is a strong contrast between the subdialects spoken in Labourd/Lapurdi and Low Navarre/Behe-Nafarroa, and Soule/Zuberoa. Thus, all the direct translations are of type II in the first two groups of dialects, in which neither type I nor type III are used. In the third province, on the contrary, there are only 9 translations of type II, but 18 of type I, and 7 of type III.

(e) A potential future: ‘Vous pourrez aussi prendre des coqs…’ ‘You may [future] also take roosters…’ (§ 7) [No counterpart in Lk]

‘Be able/allowed to’ can be rendered with the word ahal associated with either the imperfective, or the prospective, participle of the lexical verb, but also with its radical, associated with a defective auxiliary suffixe with -ke. What is more, double (morphological) futures are possible. The possibilities are thus much larger than before, but some trends are clear. (Many texts do not use any means of referring to the future).

(i) When only one morpheme is used which can express futurity, it can be: -ko on ahal (in which case the lexical verb is is the imperfective aspect): hartzen ahal d(it)uzue (type I) or -kol-ren as part of the prospective participle (in which case ahal remains unaffected): hartuko ahal d(it)uzue (type II). Type III has -ke suffixed to the inflected verb; in type IV and IV’, it is izan ‘be’ which is in the prospective aspect and associated with an inflected form of the same verb izan used as an auxiliary.

I: Hartzen ahal d(it)uzue - Lap.: 7 occurrences; B-N: 11; Zub.: 2
II: Hartuko/harturen ahal d(it)uzue - Lap.: 7; B-N: 20; Zub.: 5
III: Hartzen ahal d(it)ukezue - Lap.: none; B-N: 5; Zub.: 17
IV: Hartzen ahal izanen/ukanen d(it)uzue - Lap.: 1; B-N: none; Zub.: none
IV’: Hartu ahal izanen/ukanen d(it)uzue - Lap.: none; B-N: none; Zub.: 2

(ii) There also are three (purely morphological) double futures:

V: Hartuko/harturen ahal d(it)ukezue - Lap.: none; B-N: none; Zub.: 2
VI: Hartuko/harturen ahal izanen/ukanen d(it)uzue - Lap.: none; B-N: none; Zub.: 1 (Musculdy-Muskildi)
VII: *Hartuko/harturen abalko d(it)usue* - Lap.: none; B-N: 1 (Irisarry-Irisarri); Zub.: none

Note that -ke on the inflected auxiliary remains typical of the Zub. dialects, and that there are no counterparts to IV/IV’ (i.e. neither *hartzen abalko d(it)ukezue* nor *hartu abalko d(it)ukezue* are attested in the corpus).

(f) The past conditional (§3): *Il avait quelquefois si grand faim qu’il aurait bien mangé ces feuilles de choux […]. Mais personne ne lui donnait rien ‘He would have fain eaten…’.* [Lk 15,16]

The various possibilities to express a past, counterfactual conditional were discussed in section, 4. We therefore expect four types to be used:

I (type) *jan zukene*, cf (5c)
II (type) *janen zuen*, cf. (4b)
III (type) *janen zukene* cf. (5a)63
IV (type) *jan luke*, cf. (5b)

Interestingly, type IV is never used.

In the province of Labourd, type II is the overwhelming winner: 28 instances; type I has 3 occurrences (Lahonce-Lehunze, Halsou-Halsu, Espelette-Ezpeleta-a),64 and type III only one (Urcuit-Urketa). In Low Navarre, if type II is also widely predominant (58 cases); type I has 5, but type III has 8. Again, the province of Soule behaves differently: if type II is still predominant (21 cases), the number of cases of type I is almost as large (16), and there is no occurrence at all of type III.

To conclude, we can note that -ke appears five times out of five only in three places in *Haute Soule* - more exactly in the traditional territory called *Basabürria*: Esquiule-Ezkiula, Trois-Villes-Iruri and Laguinge-Liginaga. On the other hand, the proportion of places in which -ke was not used in any of the passages is highest in the Western province of Labourd (31 texts out of 36), the situation of Low Navarre being naturally intermediate.

63 *Hartu zükean* and even *hartzen zükean* are mentioned as possible past conditionals in today’s Soule (Arbailles-Arbaile) in Coyos (1999: 245).

64 The other translation from Espelette has type II.
